

# HTML

- HTML – Hyper Text Markup Language
- HTML documents describe web pages (Static Web Page)
- HTML tags are keywords surrounded by angle brackets like `<html>`
- HTML tags normally come in pairs like `<b>` and `</b>`
- The first tag in a pair is the start tag (opening tags), the second tag is the end tag(closing tags)

# **IMPLEMENTATION**

## **WHERE WE WRITE CODE :**

1.Text Editor

1.Wordpad (In Windows OS)

2.Gedit Text Editor (Ubuntu in LINUX)

2.FrontPage or Dreamweaver

## **WHERE WE EXECUTE :**

1.Double Click that HTML File. (or)

2.Right click – Open With Internet Explorer

# Simple Code - 1

```
<html>  
  
<body>  
  
<h1>First Planet</h1>  
  
<h6>First Planet</h6>  
  
</body>  
  
</html>
```

O/P :

**First Planet**

First Planet

- `<html> .... </html>` describes the web page
- `<body> ..... </body>` is the visible page content

# Link Tag

Html Links :

Html links are defined with the <a> tag

Syntax : <a href="http://www.gmil.com">Gmail</a>

Example :

```
<html>
<body>

<a href="http://www.gmail.com">Gmail</a>

</body>
</html>
```

O/P :

Gmail

If we click this link it goes to gmail account

# Image Tag

## HTML Images :

HTML images are defined with the <img> tag.

**Syntax :** <img src "123.jpg" width="104" height="142" />

## Example

```
<html>
<body>

</body>
</html>
```

O/P:

# HTML RULES

## HTML Rules (Lines) :

The `<hr />` tag is used to create an horizontal rule (line).

## Example

```
<html><body>  
  
<h3>Exnora</h3>  
<hr />  
<h3>Safety Exnora</h3>  
  
</body></html>
```

O/P :

Exnora

---

Safety Exnora

# HTML COMMENTS

## HTML Comments :

Comments can be inserted in the HTML code to make more readable and understandable. Comments are ignored by the browser and are not displayed.

**Syntax :** `<!-- some text -->`

## Example

```
<html><body>
```

```
<!--It will not be displayed-->
```

```
<h3>Plant Trees </h3>
```

```
</body></html>
```

**O/P :**

Plant Trees

# HTML TEXT FORMATTING

Some Formatting Tags are 1.**b-B o ld** , 2.*i-Italic*, 3.`code-Computer code`, 4.<sub>sub-Subscript</sub> & 5.<sup>sup-Superscript</sup>

```
<html><body>
```

```
<b>Confidence</b><br />
```

```
<big>Hardwork</big><br />
```

```
<i>Preseverance</i><br />
```

```
<code>Samsung CRT</code><br />
```

```
This is<sub> subscript</sub><br />
```

```
This is<sup> superscript</sup>
```

```
</body></html>
```

Implement it as a Exercise  
(Practical)

# HTML STYLE ATTRIBUTES

## Tags

## Description

<center>

Defines centered content

<font>

Defines HTML fonts

<s> and <strike>

Defines strikeout text

<u>

Defines underlined text

## Attributes

## Description

Align

Defines the alignment of text

Bgcolor

Defines the background color

Color

Defines the text color

# STYLE EXAMPLE

```
<html>
```

```
<h1 style="text-align:center">NATURE</h1>
```

```
<body style="background-color:yellow">
```

```
<p style="font-family:Purisa;color:red">Plant Tree</p>
```

```
<p style="font-family:times;color:red">Save Our Generation</p>
```

```
<p style="font-size:40">Value Our Environment</p>
```

```
</body> </html>
```

O/P :

NATURE

Plant Tree

Save Our Generation

Value Our Environment

# HTML TABLES

- Tables are defined with the <table> tag.
- A table is divided into rows (with the <tr> tag),
- Each row is divided into data cells (with the <td> tag). The letters td stands for "table data," which is the content of a data cell.
- Headings in a table are defined with the <th> tag.

```
<table border="1">  
<tr> <td>row 1, cell 1</td>  
<td>row 1, cell 2</td> </tr>  
<tr> <td>row 2, cell 1</td>  
<td>row 2, cell 2</td></tr>  
</table>
```

row1,cell1	row1,cell2
row2,cell1	row2,cell2

# TABLE FEATURES

## 1. Table with a caption :

```
<caption>My Caption</caption>
```

## 2 .Table cells that span more than one row /column :

```
<th colspan="2">Telephone</th>
```

```
<th rowspan="2">Telephone:</th>
```

## 3 .Cell padding :

```
<table border="1" cellpadding="10">
```

## 4 .Cell spacing :

```
<table border="1" cellspacing="10">
```

## 5 .Add a background color or a background

# HTML LISTS

HTML supports ordered, unordered and definition lists.

## Ordered Lists :

- An ordered list is also a list of items. The list items are marked with numbers.
- An ordered list starts with the `<ol>` tag. Each list item starts with the `<li>` tag.

## Unordered Lists :

- An unordered list is a list of items. The list items are marked with bullets (typically small black circles).
- An unordered list starts with the `<ul>` tag. Each list item starts with the `<li>` tag.

## Definition Lists :

- A definition list is not a list of single items. It is a list of items (terms), with a description of each item (term).
- A definition list starts with a <dl> tag (definition list).
- Each term starts with a <dt> tag (definition term).
- Each description starts with a <dd> tag (definition description).

### Unordered List :

- ThinkPositive
- Never Depressed
- Keep Smiling

### Ordered List :

- 1.Fail
- 2.Work Hard
- 3.Win
- 4.Teach

### Definition List :

Success  
Fail First,  
Happy  
Smile Always

# HTML FORMS

HTML Forms are used to select different kinds of user input.

- A form is an area that can contain form elements.
- Form elements are elements that allow the user to enter information like,
  1. text fields,
  2. textarea fields,
  3. drop-down menus,
  4. radio buttons,
  5. checkboxes,
  6. Action Attribute and the Submit Button, etc.

## Text Fields :

Text fields are used when you want the user to type letters, numbers, etc. in a form.

## Example :

```
<form>
```

```
First name: <input type="text" name="firstname" /> <br />
```

```
Last name: <input type="text" name="lastname" />
```

```
</form>
```

## OUTPUT :

First name :

Last name :

# RADIO & CHECK BOX

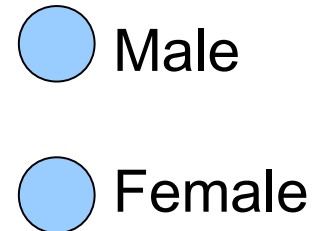

## Radio Buttons :

<form>

<input type="radio" name="sex" value="male" /> Male <br />

<input type="radio" name="sex" value="female" /> Female

</form>

Male

Female

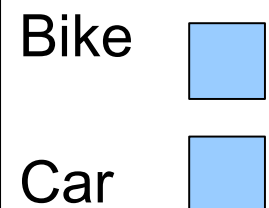

## Checkboxes :

<form>

Bike: <input type="checkbox" name="vehicle" value="Bike"/> <br />

Car: <input type="checkbox" name="vehicle" value="Car"/><br />

</form>

Bike

Car

# Form Action Attribute

## Action Attribute and the Submit Button :

- When the user clicks on the "Submit" button, the content of the form is sent to the server.
- The form's action attribute defines the name of the file to send the content to.
- It depends on PHP File.

```
<form name="input" action="html_form_submit.asp" method="get">
```

```
Username:<input type="text" name="user"/>
```

```
<input type="submit" value="Submit" />
```

```
</form>
```

Username :

Submit

# HTML LAYOUT

- A part of this page is formatted with two columns, like a newspaper page.
- The trick is to use a table without borders, and maybe a little extra cell-padding.
- No matter how much text you add to this page, it will stay inside its column borders.

```
<table border="0" width="100%" cellpadding="10">
```

```
<tr>
```

```
<td width="50%" valign="top">
```

This is the Time to save Our Earth to Our Future Generation. So everybody should be a Volunteer.

```
</td>
```

```
<td width="50%" valign="top">
```

For smooth relationship between to us & nature We should do some activities to Preserve our Earth.

```
</td>
```

```
</tr> </table>
```

This is the Time to save  
Our Earth to Our Future  
Generation. So  
everybody should be a  
Volunteer.

For smooth relationship  
between to us & nature We  
should do some  
activities to Preserve our  
Earth.

# HTML FRAMES

- With frames, you can display more than one HTML document in the same browser window.
- Each HTML document is called a frame, and each frame is independent of the others.

## The Frameset Tag

- \* The <frameset> tag defines how to divide the window into frames
- \* Each frameset defines a set of rows or columns
- \* The values of the rows/columns indicate the amount of screen area each row/column will occupy

# VERTICAL & HORIZONTAL FRAMESET

```
<html>  
<frameset cols="30%,40%,30%">  
  <frame src="frame_a.htm">  
  <frame src="frame_b.htm">  
  <frame src="frame_c.htm">  
</frameset>  
</html>
```

```
<html>  
<frameset rows="30%,40%,30%">  
  <frame src="frame_a.htm">  
  <frame src="frame_b.htm">  
  <frame src="frame_c.htm">  
</frameset>  
</html>
```
